

Project Proposal: Paws & Found - Pet Adoption Platform

Introduction

Paws & Found is a comprehensive web-based application designed to connect potential adopters with available pets and provide a streamlined solution for reporting and tracking lost pets. This platform serves as a bridge between adoption centers and individuals seeking to adopt pets while supporting the community by enabling the reporting of lost and found pets.

Goals and Objectives

- **Facilitate Pet Adoption:** Provide users with an intuitive platform to browse pets available for adoption and submit adoption requests.
- **Lost Pet Reporting:** Enable users to report lost pets, increasing the chances of reuniting them with their owners.
- **Efficient Data Management:** Provide a centralized system for admins to manage pet listings and adoption requests.
- **User-Friendly Interface:** Ensure a simple, intuitive, and responsive design for seamless user interaction.

Background Study

Traditional methods of managing pet adoption rely on in-person visits and manual record-keeping, which are often time-consuming and inefficient. Additionally, lost pet cases are typically handled through isolated channels like social media posts and community boards. Websites such as **Petfinder** (<https://www.petfinder.com>) and **Adopt-a-Pet** (<https://www.adoptapet.com>) provide online platforms for pet adoption, but often lack the integration of lost pet reporting features. Additionally, **PawBoost** (<https://www.pawboost.com>) offers a lost and found pet service, but these platforms are not fully integrated into a single, user-friendly solution. Paws & Found aims to overcome these limitations by centralizing pet adoption services and lost pet reporting, improving efficiency and accessibility.

Technologies

- **Framework:** Laravel (PHP-based framework)
- **Frontend:** HTML, CSS (with Blade templates in Laravel), Tailwind
- **Database:** MySQL

- **Version Control:** GitHub
- **Development Environment:** XAMPP or any local server environment

Features

User Interface:

- **Home Page:** Introduction and navigation
- **Pet Listings:** View available pets with filtering options
- **Detailed Pet Pages:** View detailed information about each pet
- **Adoption Request Form:** Users can submit requests for adoption
- **Lost Pet Report Form:** Users can report lost pets with details
- **Lost Pet Listings:** Display lost pet reports for community assistance
- **Pet Care Centre Listings:** View pet care centres or individuals offering temporary pet care services. Users can book a pet care service for a specific period, with options for short-term or long-term stays.
- **Pet Care Registration:** Pet care centres and individuals can register on the platform by providing necessary identification (e.g., National ID Card) for verification and security purposes.

Admin Features:

- **Secure Login:** Authentication for admin access
- **Pet Management:** CRUD operations (Create, Read, Update, Delete) for pet records
- **Adoption Requests:** View and manage adoption requests
- **Lost Pet Reports:** Manage and track lost pet reports
- **Pet Care Centre Management:** Admin can verify and manage pet care centre registrations, ensuring that all centres or individuals offering care services are properly verified and compliant with platform standards.

Project Schedule

• Phase 1: Planning and Design (Weeks 1-2)

- Conduct requirement analysis for pet adoption and lost pet features.
- Design system architecture and database schema.
- **Estimated Budget: \$500**
 - Research & analysis: \$200
 - System design & database schema: \$300

- **Phase 2: Development (Weeks 3-7)**

- Set up Laravel and configure the development environment.
- Develop the backend using Laravel controllers and Eloquent ORM.
- Create UI with HTML, CSS, and Blade Templates.
- Implement secure database connectivity with MySQL.
- **Estimated Budget: \$2,500**
 - Laravel & development environment setup: \$500
 - Backend development: \$1,000
 - Frontend design & integration: \$500
 - Database setup & configuration: \$500

- **Phase 3: Integration and Testing (Weeks 8-9)**

- Integrate the database with backend functionalities.
- Conduct unit and integration testing for all components.
- Perform user interface testing and form validation.
- **Estimated Budget: \$1,000**
 - Database integration: \$300
 - Testing (unit, integration, UI validation): \$700

- **Phase 4: Deployment and Feedback (Week 10)**

- Deploy the system on a testing server.
- Gather user feedback and make improvements.
- **Estimated Budget: \$500**
 - Deployment & server setup: \$300
 - User feedback collection & analysis: \$200

Total Estimated Budget: \$4,500

Future Enhancements

- **User Authentication:** Secure login and registration for users and admins.
- **Real-Time Notifications:** Alerts for adoption updates and lost pet reports.
- **Advanced Filtering:** Improved search features for pet listings.
- **Analytics Dashboard:** Insights into pet adoption trends and platform usage.
- **Mobile-Friendly Design:** Enhance user experience for mobile users.

Flowchart:

Conclusion

Paws & Found aims to simplify and digitize the pet adoption process while supporting the community by enabling lost pet reporting. By leveraging Laravel and MySQL, the platform will provide a secure, efficient, and user-friendly solution. Continuous development based on user feedback will ensure the system meets evolving needs.
