

**Introduction:**

Paws & Found is a web-based platform designed to connect potential adopters with pets available for adoption and assist the community in reporting and locating lost pets. This integrated solution facilitates easy pet browsing, adoption requests, lost pet reporting, and administrative management — all through a secure and user-friendly interface. The project aims to digitize and simplify the pet adoption process while increasing the chances of reuniting lost pets with their owners.

**Problem Statement:**

Pet adoption and lost pet reporting traditionally rely on manual, scattered methods like in-person visits, social media posts, and physical notice boards. These approaches are inefficient, lack centralized data, and cause delays in reuniting pets with families. There is a need for an integrated, easy-to-use digital platform to:

**Motivation:**

Our motivation comes from the desire to help animals find loving homes faster and reduce the distress caused by lost pets. By providing a one-stop digital platform that combines adoption and lost pet reporting, we aim to enhance community engagement, streamline administrative workflows, and improve communication between pet seekers, owners, and caretakers.

**Background Study:**

Existing platforms like Petfinder and Adopt-a-Pet offer online pet adoption services, while PawBoost focuses on lost and found pet reporting. However, these services often function separately, lacking integration and streamlined management. Paws & Found addresses this gap by unifying adoption and lost pet services into one cohesive platform, simplifying user experience and improving operational efficiency.

## **Technologies Used:**

- Framework: PHP for backend logic
- Frontend: HTML, CSS, PHP
- Database: MySQL for storing pet, user, and admin data
- Server Environment: XAMPP for local development and testing
- Version Control: GitHub (for source code management)

## **Features:**

### User Interface:

- Home Page: Introduction and navigation menu
- User/Admin Login: Secure authentication for different user roles
- Pet Listings: View categorized lists of pets available for adoption or reported lost/found
- Adoption Request Form: Users can submit adoption applications
- Lost Pet Reporting: Users can report lost or found pets with details and photos
- Pet Care Centre Listing: View and book temporary pet care services
- User Registration: New users can create accounts to access platform services

### Admin Features:

- Dashboard: Centralized control panel for managing pet records and user submissions
- Pet Management: Add, update, delete pet records and track their status
- Adoption Requests: Review and manage incoming adoption applications
- Lost Pet Reports: Manage and track lost pet listings
- Pet Care Centre Verification: Approve registrations of pet care centres or individuals

## **Methodology:**

The system development followed these stages:

- Requirement Analysis: Gathered user needs for adoption and lost pet reporting functionalities.

- **System Design:** Created database schema and system architecture for secure and efficient data flow.
- **Development:** Built frontend and backend modules using PHP and MySQL.
- **Testing:** Conducted unit, integration, and user interface testing to ensure functionality and usability.
- **Deployment:** Setup on local server environment for demonstration and testing purposes.

A flowchart depicting the user and admin interaction with the system was created to visualize the process flow.

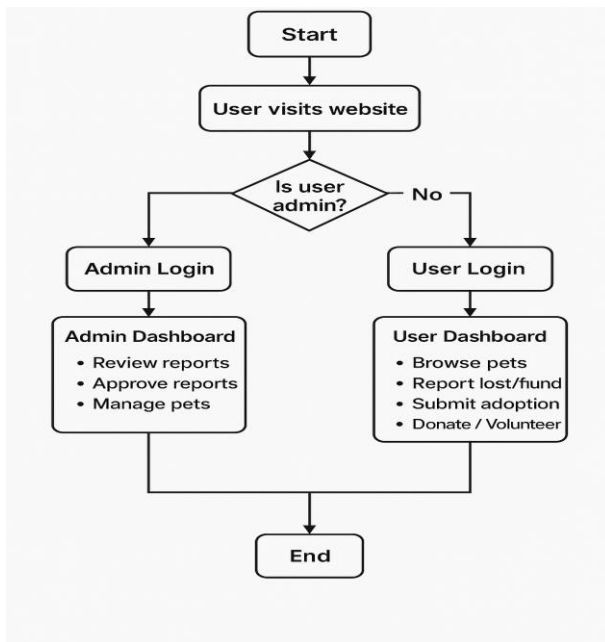

### Project Schedule

| Phase                          | Duration  | Activities                               | Budget (USD) |
|--------------------------------|-----------|------------------------------------------|--------------|
| Phase 1: Planning & Design     | Weeks 1-2 | Requirement analysis, system & DB design | \$500        |
| Phase 2: Development           | Weeks 3-7 | Backend & frontend coding, DB setup      | \$2,500      |
| Phase 3: Integration & Testing | Weeks 8-9 | Database integration & testing           | \$1,000      |
| Phase 4: Deployment & Feedback | Week 10   | Deployment, feedback & improvements      | \$500        |
| Total Estimated Budget         |           |                                          | \$4,500      |

**Limitations:**

- Image Quality: User-uploaded photos may be unclear, making pet identification harder.
- No Automated Alerts: Lack of real-time notifications or email alerts for status updates.
- Manual Approval: Admin must manually verify and approve all content submissions, which may slow down processing.
- No Direct Messaging: Users cannot communicate directly through the platform.
- Mobile Responsiveness: Some pages do not display optimally on mobile devices.
- Location Filter: Cannot currently filter pets by geographic location.

**Future Enhancements:**

- Implement user and admin secure registration and login with role-based access control.
- Add real-time notifications via email or SMS for adoption status and lost pet matches.
- Enhance search with location-based filtering and advanced criteria.
- Develop mobile-friendly responsive design for better access on phones and tablets.
- Integrate direct messaging between users for improved communication.
- Build analytics dashboard for tracking adoption trends and platform usage.

**Conclusion:**

Paws & Found is a comprehensive platform that bridges the gap between pet adoption and lost pet reporting. By centralizing these services on a secure and user-friendly website, it enhances the chances of pets finding new homes and lost pets being reunited with their owners. The project demonstrates the power of technology in supporting animal welfare and community engagement. Continued development and user feedback will help improve its features and impact.
